Call Center Trends Analysis

Home Page | Over View | Calls | Agent

Insights

- **Answer rate 81%**: 946 of 5,000 calls went unanswered, and the number is nearly constant every month (≈315).
- **Resolution rate 90%** of answered calls, but only **73%** of total calls.
- **Satisfaction 3.4 vs. a target of 4.4**: a full-point gap despite the high resolution rate.
- **Average Speed of Answer (ASA) 67.5 seconds**, with delays across all agents (65–71), so the issue lies in operations, not individuals.
- **Agent performance is closely matched**: Jim leads with 485 resolved calls, Stewart is lowest with 424.
- **Topics are balanced** (976–1,022 calls each), with Streaming having the highest volume.

Recommendations

1. Reduce unanswered calls by rescheduling shifts during peak hours.
2. Reduce ASA to improve the customer experience and raise satisfaction.
3. Address Streaming issues, as it has the highest volume and a below-average resolution rate.
